

SendMe Connectors

**List of the Manufactures
that connect to SendMe**

Define Connectors

Document Management Systems

- Database server software for business's to securely store digital assets, in an organized cataloging filing system. Giving authorized individuals easy access and retrieval of that data. The database is designed to grant layers of different types of access based on the individuals credentials.

Routing Systems

- Solutions designed to provide organizations a mechanism to securely and in some cases distribute data to multiple locations, in multiple formats, and allowing quick access to that data. Advantages of routing systems are how they deliver information as an email, a fax, or to print, and send the data to an archival system simultaneously.

Fax Systems

- Enterprise fax solutions that corporations use to integrate fax and email services and clients directories seamlessly to track, recover, batch multiple faxes and email securely throughout and organization. Allowing users to securely fax and email from your desktop applications.

Accounting Systems

- Providers of automated cost recovery solutions. Keeping track of business expenses of document imaging, distribution, and administer document management for intellectual property by defined reporting structures
- Manage how employees securely print documents to any device anywhere in your organization — across servers, departments or locations
- At the same time, you can track all printing activity, reduce waste and contain costs, however vast your enterprise

Authentication Systems

- Authentication management is the overall process of managing identities and their authentication by providing access by means of ID cards, Password authentication, Lightweight Directory Access Protocol (LDAP), Network authentication, Biometric authentication (Fingerprint), or other authorization tool all to manage different levels of access securely throughout and organization.

Document Management Systems

Captaris® Alchemy®

Alchemy is the document management software solution for thousands of small and mid-size businesses, providing document scanning, document imaging, document archiving, fax archiving and electronic records management capabilities.

OPEN TEXT
The Content Experts™

DocRecord

DocRecord captures information from across your organization seamlessly and lets you take control of your documents. Document imaging is made easy with DocRecord Imaging that captures scanned documents and uses OCR to extract a copy of the text for indexing and storage. Improve image management with mark-up, annotation, and image enhancement. DocRecord manages information from a variety of sources across an organization's network. Easily watch network folders, watch queues, and integrate with other enterprise applications. With DocRecord, it's even possible for users to drag-and-drop files from their desktop into the system.

DOCSBox™

Document Management usually accessed remotely via a standard web browser. Searching for documents from any remote location, without incurring firewall issues, allows convenient access to documents, no matter where you are. Document management is no longer restricted to the office

DocuLex Document and Content Management

project management features include an expandable tree view of projects and batches created, easy document QC with thumbnail and drag and drop images, screen sensitive action buttons as well as content sensitive help. Other great features users will enjoy are the ability to scan and begin real time QC from multiple stations* and speedy OCR at scan time or at the job, batch and document level. Added innovations include the flexible creation and use of settings across projects. This means that Discovery Capture users can create or adopt templates like bates formats, index fields, custom separator forms and more. Further these templates can be applied to the entire job or batch whenever the user decides. There is amazing flexibility that you just have to see to believe.

DocuLex™

Document Management Systems

DocumentMall v9

Software-as-a-service on-demand solution that lets you store, retrieve, manage and share electronic files and scanned paper documents using the Internet. You can use DocumentMall for:

- Document Archiving
- Document Distribution
- Document Management
- Document Collaboration

Documentum ApplicationXtender

Quickly capture, organize, and deliver fixed-content images, documents, reports, and other business-critical information.

Documentum EMC Captiva Family

Transform business-critical paper, fax, and electronic data sources into business-ready content suitable for processing by enterprise applications.

Xerox DocuShare

Web-based software application that delivers sophisticated, yet highly personalized content management capabilities. DocuShare enables users to capture, manage, share, and protect a wide range of paper and digital content in a secure, central, and highly scalable repository. DocuShare's intuitive, easy user interface enables high adoption; users can get up and running the same day it's installed and they can be fully trained in a week. DocuShare is easy-to-deploy, requiring little to no IT support, and it works with all common hardware and software.

Document Management Systems

Docutron Document Management™

A versatile, highly scalable and feature rich document management application. It is an entirely browser-based software product that offers highly customizable elements to allow Docutron engineers, systems administrators and partners the ability to create a perfect total solution for document management.

DocuWare AG©

Web-Based Document Management with Maximum Comfort
Whether you're on the move, in field sales, at your home office or on your office workstation - you can access many standard DocuWare functions directly via your Web browser. Thanks to the latest Web 2.0 technologies, finding and distributing documents and workflow management is as fast and convenient as with Windows programs. At the same time, administration is much simpler too.

eDejaview

Every document your company has ever created can be immediately viewed on your PC. As you view a document, you can EMAIL, PRINT or FAX it with a click. eDejaView provides instant, secure online access to any document, anytime, from any computer or mobile device. Accu-Image offers customized indexing solutions based on keywords, bar code or content that match your specific retrieval needs. Your documents can be scanned and captured using OCR. Any words in the document can be used as search keywords.

FileBound

The FileBound solution manages all your informational assets including active paper documents, documents and files stored off-site, documents converted to digital images, Word documents, PDF's, E-mails and any other digital files. FileBound allows you to build a seamless solution that stores, manages and delivers these assets. FileBound addresses all areas of records management, using the latest technology and development techniques and providing the option of accessing the solution from our world class data center. The underlying architecture allows FileBound to accept any object in any format and track it anywhere. The power of FileBound is its simplicity, ease of use and low cost. FileBound addresses the issues Record Managers are required to deal with daily. The flexibility of the FileBound resources allow it to provide measurable results in any information intensive application.

Document Management Systems

IBM® FileNet® Content Manager

FileNet Content Manager delivers the advantage of active content — content and documents that actively drive process automation to completion. Its active content capabilities are designed to enable your documents and other forms of content to drive task resolution and help reduce time, cost and risk. Your business can respond immediately to the business and transaction events that set critical processes in motion and drive them quickly to completion, increasing the overall responsiveness and agility of your operations.

Fortis Document Management Software

Fortis, a comprehensive document management software suite from Westbrook Technologies, provides superior document-handling solutions by leveraging the advantages offered by client/server technology and Microsoft's Open Database Connectivity (ODBC) architecture. Fortis operates as a true client/server system with the database engine installed on a dedicated database server, the client software installed on a shared network server, and client workstations configured to access both the shared-client server and the database server.

Hummingbird Enterprise DM

DM eliminates the mounting inefficiencies caused by the inability to manage documents as well as the “islands of information” prevalent in many global organizations. It helps control document-based knowledge assets by enabling users to capture, organize, locate and share business content in a secure, integrated, and intuitive environment. From documents, e-mail, graphics, and forms to discussion threads, engineering drawings, scanned paper and electronic-based records, content is consolidated in a unified enterprise knowledge base for easy access and retrieval.

ImageDirector™

ImageDirector works with your multifunction printer, making it more intelligent. It scans, indexes and archives all your documents so they can be easily located and shared by all. It takes all those pieces of paper that flow across all the desks in your company and turns them into intellectual capital that can be used by your staff and customers. And it does it all easily, as part of the copy process

Document Management Systems

ImageNow Technology

Across your enterprise, Perceptive Software creates a direct and effortless connection between workers and the documents they need to complete daily activities. Using our flagship product, ImageNow, you can efficiently capture and organize all types of documents, then retrieve a precise page instantly from within any business application at the moment it's needed

Invu

Management system, for one or multiple users, is based on the most innovative technology available. It enables users to: Store information, in any format, in one centralized, electronic system Search and retrieve documents, either our network Digital Document content or using the in-built indexing structure View and share documents in single or multi-page format Organize communications, such as post and email, into the same system Configure security to allow users and groups different levels of access according to their own needs and privileges Achieve regulatory compliance, by creating watertight audit trails Protect files from loss, damage or accidental deletion.

Laserfiche

Laserfiche 8's auditing system includes the comprehensive security reporting you need to accurately assess your business processes, as well as to track document-related activity to improve quality, accountability and productivity

NetDocuments

Offers organizations of all sizes a web-centric, SaaS (Software-as-a-Service) document, email and records management service, including extranet services. Documents can be easily and securely shared with clients and others, and documents are protected and backed up in redundant, to ensure built-in business continuity. Documents can also be backed up locally on your network using the NetDocuments.

Document Management Systems

Open Text

Electronically capture, meta-tag, archive, and distribute reports, improve access to critical business information, and enable your IT staff to focus on high value operational tasks

ScanPoint uniConnect

Allows you to image-enable virtually ANY Windows Application, right out of the box, as well as directly integrating with a number of popular software packages. Direct integrations include LexisNexis Time Matters, Interwoven WorkSite MP, Microsoft Dynamics Great Plains, SureClose, LexPI and more! uniConnect is an easily customizable and expandable solution that can streamline the document workflow of a single copy machine, a full department or an entire enterprise.

Windows SharePoint

SharePoint sites that support specific content publishing, content management, records management, or business intelligence needs. You can also conduct effective searches for people, documents, and data, participate in forms-driven business processes, and access and analyze large amounts of business data.

CT Summation

CT Summation pioneered integrated litigation support software in 1988, with ongoing input from legal professionals who understand the many facets of litigation. As a result, our software solutions include built-in safeguards that help prevent problems such as violation of attorney-client privilege. Today,

Document Management Systems

SureClose®

The leading online transaction management platform for the real estate, closing and mortgage industries. SureClose is designed to increase productivity, improve efficiency and provide you with a better way to do business. SureClose delivers a turnkey paperless office solution for brokers, REALTORS®, lenders, title / escrow / attorney services and MLS organizations. SureClose streamlines the paperless real estate transaction from listing-to-closing by connecting all parties in the transaction.

Windream

Offers enhanced functions concerning advanced rights assignment and the integration of storage system environments for constructing global data infrastructure systems with integrated life-cycle management. Windream BPM (Business Process Management) extends the document management and archiving system by a powerful and easy to handle application for business process management. Besides DMS and archive, users will now also get a complete software package which allows them construct, edit, and supervise all kinds of business processes.

Interwoven WorkSite

Provides a shared environment for storing business content and a system for tracking updates, milestones, and communications. Documents—both paper and electronic—records, e-mail messages, and other media are consolidated in a central library, making them easier to find, share, and reuse. Version control, automated notifications, and advanced search options streamline execution and simplify the handoff of work among team members. Business users and professionals manage access and security to workspaces, reducing the demands on the IT organization.

Document Management Systems

Worldox

Library Services: tools for organizing and improving the way you save, catalog, and retrieve files...

Network Support: tools for giving users a single, unified point of access to all their data, wherever it exists on your network...

Document Security: a focal point for controlling user access and document permissions.

Full Text Retrieval: a search mechanism based on concepts, not just categories, giving users enterprise wide access to their documents.

Document Viewers: tools for viewing multiple types of files even when their source programs are not installed on the local client system.

Archiving: tools for moving dated or unused files to lower priority storage, while still keeping them accessible when needed.

Version Control: tools for tracking the evolution of a document, and ensuring that the correct version is being used and edited

Document History: tools for auditing a document's history: who did what to it, and when

Access Control: tools for helping multiple authors coordinate their activities on a single document.

ZyIMAGE's Document Management (DM)

Module is a straightforward tool that enables you to effectively manage all of your electronic files (such as those created with Microsoft® Office tools). You can add a full range of document management functionality to your ZyIMAGE archives (indexes), including check-in/check-out activities and version control.

Routing

EMC Captiva InputAccel

Enables you to capture information from paper, electronic files, and data sources, whether it is centralized or distributed—transforming it into digital content, and delivering it into back-end systems and content repositories. By helping your business reduce or completely eliminate manual data entry, InputAccel minimizes processing errors, improves data accuracy, and boosts productivity

EMC Captiva Family

Transform business-critical paper, fax, and electronic data sources into business-ready content suitable for processing by enterprise applications.

Kofax Capture, formerly Ascent Capture

Accelerates business processes by collecting documents and forms, transforming them into accurate, retrievable information, and delivering it all into your business applications and databases. Whether your information is on paper or in electronic files, whether it is parked at a central office or scattered on desktops and remote offices throughout the world, Kofax Capture can help you capture it all quickly and accurately.

The KOFAX logo features the word "KOFAX" in a bold, white, sans-serif font on a blue rectangular background. To the right of the text is a white globe icon composed of a grid of dots.

AutoStore

Capture. Process. Route. Capture print or electronic documents, process them into various digitized formats, and then route them to virtually any destination.

It works with any device capable of scanning documents regardless of type or manufacturer. It is designed to capture both print and electronic documents. AutoStore workflows can be set up from a central location and then accessed from multiple locations on multiple devices. No other document capture product is as intuitive, easy-to-use and as powerful as AutoStore.

The logo for NSI Notable Solutions, Inc. features the letters "NSI" in a blue, stylized font on the left, and the text "Notable Solutions, Inc." in a smaller, black, sans-serif font on the right, all set against a dark grey background with a white diagonal line.

AccuRoute

Omtool's award-winning document handling platform that captures, converts and distributes paper and electronic documents. AccuRoute is the document routing hub that captures and transforms both paper and electronic-based documents and routes the information within and outside an organization, AccuRoute is the unique software platform that enables flexible distributed-document capture with enterprise-class manageability, reliability, scalability, security, auditing and tracking. AccuRoute is also the only document capture and routing solution to deliver fully integrated enterprise fax capabilities from a single provider.

The omtool logo features the word "omtool" in a lowercase, blue, sans-serif font. Below it is the tagline "Driving Your Information Route™" in a smaller, black, sans-serif font. The entire logo is set against a white background.

Routing

RoutingGlobalScan

Enterprise Document Scanning and RoutingGlobalScan Workflow Suite enables document scanning and rapid distribution of digital information across the enterprise. GlobalScan now comes with the Workflow Suite Standard Edition which provides "out-of-the-box" connectors to scan directly to popular destinations and business software applications.

GlobalScan™ Workflow Suite

Fax

FAXCOM Fax Server Solutions

Fax server and fax software solutions provide a network fax service for users, applications, and MFPs. Biscom's FAXCOM Server supports desktop and production fax requirements, email to fax, Web fax, and customized fax workflows

The logo for BISCOM, featuring the word "BISCOM" in a bold, red, italicized sans-serif font.

CallegraFAX

Native fax services component to Callegra. CallegraFAX combines the power of unified messaging and computer-based fax technology into one easy-to-use system that provides virtually unlimited fax capabilities. Natively written for Windows NT Workstation and Server platforms; CallegraFAX for Windows NT is the most flexible, robust fax solution for fax server capabilities, telephone access, and production fax-on-demand requirements.

Open Text Fax Server...RightFax

The proven market leader in fax server, document delivery and fax software. It delivers the most reliable and robust fax software solutions to integrate and automate the flow of a full range of fax, paper and electronic documents and data, enabling enterprises to achieve significant cost reductions. By using Open Text Fax Server, companies can securely and efficiently deliver business information from virtually any application via fax, email, print devices or over the Internet.

The logo for OPEN TEXT, featuring the words "OPEN TEXT" in a large, black, serif font, with "The Content Experts" in a smaller, blue, sans-serif font below it, all within a white rectangular box with a blue gradient bar.

Captaris FaxPress - Network Fax Appliance

Enables Easy and Affordable Network Fax
Manually sending and receiving documents with stand-alone fax devices?
Needing to track and log faxes automatically while keeping your faxes secure?
Considering an MFP with fax enablement?
looking to scan your documents to a network location?

Fax

Open Text (RightFax) - Fax Server, Email to Fax, Fax Over IP & Electronic Document Delivery Software

Open Text Fax Server (RightFax) is the proven market leader in fax server, document delivery and fax software. It delivers the most reliable and robust fax software solutions to integrate and automate the flow of a full range of fax, paper and electronic documents and data, enabling enterprises to achieve significant cost reductions. By using Open Text Fax Server, companies can securely and efficiently deliver business information from virtually any application via fax, email, print devices or over the Internet.

Esker Fax

Streamlined information flow for faster communication Increased productivity for administrators and end-users. Reduced messaging and business communication costs. improved competitiveness, improved customer loyalty, and integrates with no custom programming.

FACSys®

Active Fax Messaging is emFAST's latest advance in fax integration technology. Utilizing the ActiveX/COM model, writing custom fax-enabled applications is made easier than ever. At the same time, developers have access to a wider range of FACSys features than before. Please navigate the documentation and code samples to see what Active Fax Messaging is all about.

DM Fax Server™

The Imecom DM Fax Server, part of the Use it Messaging Product Family, is an established leader in network fax server, fax software, document delivery and fax over IP. It provides robust, reliable fax software solutions for all your network fax and document delivery needs, enabling you to attain significant cost savings

Fax

Stream Fax

The Stream Fax network fax solution integrates with Microsoft Exchange (Outlook), Lotus Notes, GroupWise, and also may be integrated with virtually any simple mail transfer protocol (SMTP) mail server, acting as the fax gateway through which outgoing faxes are sent and incoming faxes are delivered. Inbound faxes are received as email messages with either a TIFF (graphic file format) image or PDF (Adobe Acrobat) file attached. The messages are immediately, automatically routed to the appropriate mailbox for viewing. Faxes can be saved, forwarded, printed, and/or deleted. Stream Fax supports several methods of inbound fax routing.

The logo for Stream Fax, featuring the word "stream" in a lowercase, sans-serif font, followed by four dots of increasing size from left to right. The logo is set against a white background with a subtle reflection effect below it.

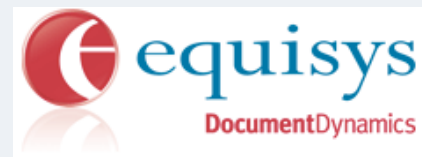

XMediusFAX®

XMediusFAX is also fully integrated with industry-leading MFPs and copiers through native integration (OKI and Muratec), proprietary connectors (Canon and Sharp) and standard T.37 protocols (Xerox, HP, Ricoh, and Toshiba). And for companies that want to extend the useful life of analog fax and to leverage their investments in MFPs while they transition to converged IP networks and Unified Communications systems, we recommend the SAGEM FAX ATA 101S (Analog Terminal Adaptor). The many benefits of linking MFPs to your XMediusFAX solution include. Accelerated and streamlined document management. Access to company address books through Active Directory integration. Audit trails to facilitate regulatory compliance (e.g., HIPAA and SOX)

Zetafax

Integrates tightly with both Microsoft Office and Lotus Notes. Users can manage fax creation, delivery and receipt directly from their email client or favorite office application, saving time spent printing and manually faxing documents. The familiar interfaces make the faxing process simple and easy to learn whilst improving worker efficiency. For more advanced users the Zetafax Client provides a rich feature set such as fax annotation, editing and control options. You can even monitor the status of faxes as they are being sent and be notified of any failures, ensuring important documents never go missing.

Accounting

Billback

Helps you charge back for more client expenses. In addition to copy, fax, scan, and network print capturing, the system can also be used to capture 3rd party imports like FedEx charges and other sundry items such as client lunches. Because Billback is highly automated and connects directly to an accounting system, fewer reimbursement opportunities are lost.

Copitrak Eclipse Embedded Solution

This software-only (no terminal required) embedded technology allows the Eclipse Copitrak/Faxtrak system to seamlessly run on other platforms include embedded Multi-function device. Today Copitrak products offer a fully integrated enterprise system that includes copier, fax, printer, scanner, phone, postage and other disbursements such as Rightfax, QuickLaw, FedEx and UPS. These automated tracking tools, along with our powerful WebEdit for transaction (errors and exceptions) editing and Crystal Reports, makes it easier for your firm to manage and maximize recoveries.

Equitrac Office

Provides simple yet powerful network-based authorization, authentication and accounting for all printer and copier use. Available both as an device-embedded or terminal-based solutions, Equitrac Office 4 supports networked multifunction printers from every major office equipment manufacturer as well as multiple print workflows, database types, operating systems and user identification methods - all of which speeds and simplifies direct integration with your existing IT infrastructure.

Equitrac Embedded

Software puts secure and convenient release of prints - as well as complete tracking of copies, scans and faxes - at your fingertips, in the touch screen control panel of today's leading multi-function printers (MFPs).

Accounting

Jamex

Vending systems provide simplicity, flexibility and convenience for a wide range of cost recovery environments: libraries, schools, office supply stores, print shops, post offices, convenience stores, business centers, even stand-alone kiosk systems. With Jamex, you'll have the ability to configure a multi-copy system with units that accept coins and bills or just coins. These units can be customized with mounting systems and stored-value cards, which are currently used at libraries and college campuses across the country.

nQueue

The leading provider of information accountability software to the legal market, is proud to announce that on July 11, 2006, the United States Patent Office issued U.S. Patent 7,076,184, which covers certain methods for embedding cost recovery solutions. Specifically, this patent covers methods for accounting for a job at a copier by transmitting certain data relating to the job to an expense recovery server via a communications network. This technology is the foundation for nQueue's Embedded Product Lines, supporting major copier manufacturers such as, Ricoh, Canon, Xerox & Sharp.

Authentication

Belgium digital ID Card

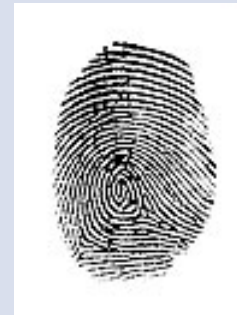

New card is to be safer and easier, comes with a chip that contains a digital signature, and it can be used in card-readers, kind of like credit or debit cards, with PIN codes and stuff. It is also a lot smaller, so it is now the same size as a credit card.

Created in Belgium

Biometric Fingerprint Authentication

By contrast, a biometric computer security system requires the user to provide a fingerprint (or other biometric) to the system, which is then verified against a stored biometric template. Because fingerprints offer an additional factor of authentication, i.e., something you are, in addition to something that you know (password), or have (token), biometric security systems offer significant improvements over traditional computer security

NTLM & LDAP Authentication

NTLM Authentication module uses a simple LDAP connection to Windows Active Directory for further authentication. This is still in development and not to be used in production environment. The module is aimed at those who want LDAP Authentication with the option of NTLM, but also require something easier and simple to use that will work with Windows Domain Controllers.

Proximity cards

RFID "prox cards", like contactless smart cards, communicate through an embedded antenna to a remote receiver. Unlike smart cards, prox cards are read-only devices. It is not possible to write information back on to the card's chip. Prox cards also generally have a greater range of operation than smart cards - from 2.5" to 20" (63.5mm to 508mm), depending on the reader. The amount of information prox cards store is relatively small; an example might be identification codes verified by remote computers to allow access.
